**Question:** The 17th term of an AP exceeds its 10th term by 7. Find the common difference.

## **Solution:**

Parameter	Value
x(16) - x(9)	7

Using the formula for the nth term of an AP (x(n) = x(0) + (n)d), where (x(n)) represents the (n + 1)th term of an arithmetic progression (AP)

$$x(16) = x(0) + 16d \tag{1}$$

$$x(9) = x(0) + 9d \tag{2}$$

$$(x(0) + 16d) - (x(0) + 9d) = 7 (3)$$

$$7d = 7 \tag{4}$$

$$d = 1 \tag{5}$$

Now,

$$u(n) = x(n) = x(0) + (n)d$$
 (6)

The z-transform of u(n) is given by

$$U(z) = \sum_{n=-\infty}^{\infty} u(n)z^{-n}$$
 (7)

$$U(z) = u(0) \cdot \frac{1}{1 - zd} + d \cdot \frac{z}{(1 - zd)^2}$$
 (8)
